

# Epi-Week 52 Cases Dec 26, 2021 to Jan 1, 2022

## South Vancouver Island Inset

## Greater Vancouver Inset

Additional cases with missing address information:  
24 - Interior Health  
23 - Fraser Health  
102 - Vancouver Coastal Health  
107 - Island Health  
5 - Northern Health

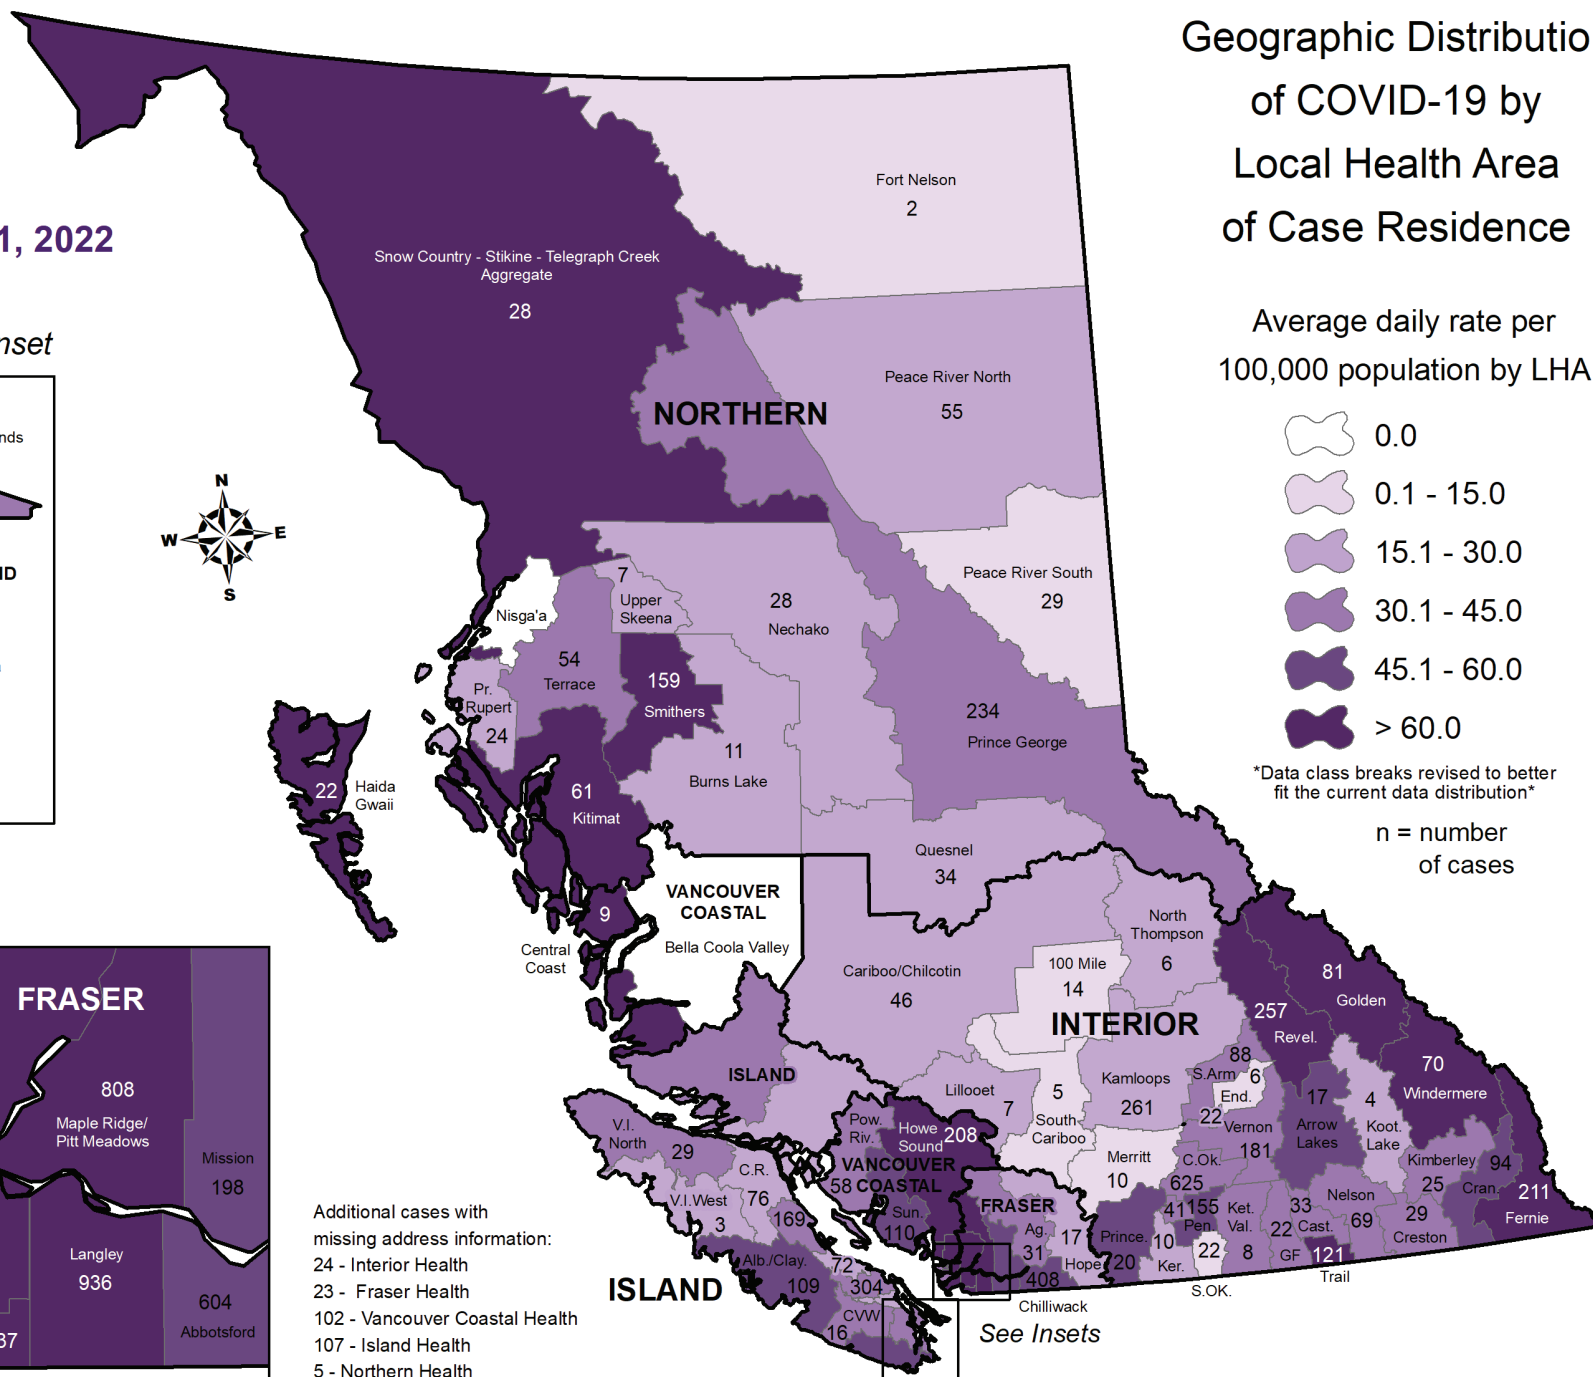

## Geographic Distribution of COVID-19 by Local Health Area of Case Residence

Average daily rate per  
100,000 population by LHA

\*Data class breaks revised to better fit the current data distribution\*

n = number  
of cases

Notes: Cases are mapped by location of residence; cases with unknown residence and from out of province are not mapped. Data source: Public Health Reporting Data Warehouse (PHRDW) integrated COVID dataset; we operate in a live database environment and case information from the health authorities are updated as it becomes available. How to interpret the maps: The map illustrates the geographic distribution of reported cases for the most recent epidemiological week (from Sunday to Saturday). Local Health Areas (LHA) with higher rates are illustrated in darker colour shading. The number of reported cases appears in each LHA. Note that the number of cases in the LHA may not represent the location of exposure (e.g. people who acquired disease while traveling or working elsewhere), and that not all COVID-19 infected individuals are tested and reported. Furthermore, community case rates should be interpreted in the context of community vaccination coverage; you can view this information in the BC COVID-19 Regional Dashboard (<http://www.bccdc.ca/health-professionals/data-reports/covid-19-surveillance-dashboard>). Map created January 5, 2022 by BCCDC for public release.
